DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 4-5, 25- 26 are rejected under 35 U.S.C. 102(e) as being anticipated by Norris et al USPN 6,823,213. Norris detects T – waves using conventional T wave detection techniques which may include amplitude (i.e peak value - column 3 lines 20 – 27) detection to generate a series of alternating beats (odd – even) which are statistically by interval lengths of the difference between odd and even beats. The examiner considers such a statistical test to be an “adjacent value” test since the values of adjacent beats are being evaluated. The statistical value (QT diff) gives an indication of the degree of t- wave alternan presence. The reference also indicates that amplitude average differentials may be used (column 13 lines 54-67)

Allowable Subject Matter

Claim 3 is allowed.

Claims 6-7, 27-28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
